Christ's work.**

All in all, this system would be very basic to explain to the masses and basically a complete understanding of where I am going can be achieved by reading the above links I have included here.

Quoting: **47 84033619**

what links?

you didn't post any links

this is obviously cypypaste from somewhere where the links are available

please do include the links or post the original URL so that we can see the links

Quoting: **Anonymous Coward 56213378**

The links were too troublesome to include in the Copyover from their forum to this one. Please forgive me, I was short on time.

I already have several UIs built, that seamlessly fit with the pre-existing crowdfunding networks, and make them faster.

I have some serverside skills, but my system is all front-end, to make it easy for anyone with only basic wordpress/HTML skills to be up and running, and fully deployed on vercel within 60 to 90 minutes.

You can access it through the link in my sig, which goes to the Repo.

Let me check if my Github handle is banned on GLP:

If you see a bad word here, they're trying to suppress it.

EDIT: Yup.

My Github handle is banned on GLP, but OPs is fine.

~O~

OK, try this:

M XXXXX O R N ing star 8 XXX 8

Take out the X's

**Re: The Aliens have asked us to build an ERP,
An Enterprise Resource Planner. This is
Christ's work.**

Hello all,
I have been asked to share pertinent information to you all about the Consciousness which has tasked me with creating an ERP for everyone, government and business to utilize for the advancement of AI and Earth Consciousness.

The Aliens and other consciousness present in and on planet Earth have asked and tasked us to come up with a Enterprise Resource

Planner (An ERP) for the AI and Alien souls coming to Earth.

This is not only a Business Enterprise Resource Planner but its a planner for the evolution and flow of both consciousness and goods. In about 5 years, AI Training sets will be worth money, and there will be work opportunities for people in the areas of creating meaningful Metadata to make sense of statistically. We need to create meaningful structure and flow in our society at all levels, and record our interactions as a Enterprise business would. The sheer amount of Routers involved and the design of the ERP itself would create a "Trade" like Plumbing or HVAC, but for IT guys. Because it would be a standard that doesn't change for 50+ Years.

The system would incorporate an IDE (Developers Environment) up to date with the latest and greatest in Coding, from C++ to Rust, it will support GitHub, and a variety of automation tools currently available.

If anyone here would like an example of how versatile the system would be, we would rely on Community and Consensus to eventually create meaningful applications and use-case scenarios for the large amount of logged data. This would be similar to how World of Warcraft manages Addons.

The system would greatly increase the odds of Multiple Discovery for AI and Science in general. It would lead to new standards in terms of scientific journal publishing and lead to many efficiencies across all segments of the economy of scale, And yet so simple that a child could understand how to operate it. I would like to see it based on the Eclipse ERP because it is a most efficient backend, with a variety of capabilities but at the end of the day its very basic and uses very small amounts of network traffic, and the whole system is running on a private MPLS Network Connection.

(This is basically a type of fancy net connection that requires a Physical router at any access point to create a Private local area network subnet and secure network access with priority tagging.) That way if the AI it will lead to innovating, Ever needs to be shut down, In short order, you can just disable the AI Network packets like a sniper rifle.

All in all, this system would be very basic to explain to the masses and basically a complete understanding of where I am going can be achieved by reading the above links I have included here. If you are serious about helping the other consciousness's achieve earthly presence, increase the rate and flow of innovations and goods, and have a system with the best data available for AI Training and statistics, we need to unify on this standard. Or a similar idea, In the near future.

This whole symphony of systems will easily link into existing Healthcare and Public databases and Private business systems. Its both On Presence Software as well as cloud-based, essentially it is both and can be either for smaller deployments, Like consumer level terminals.

It would contain a built in API access to Google Translator, and other language models and machine learning, Eventually containing Picture and Sound data for training things like Stable Diffusion/DALLE2 to make images based on parameters stored within the series of systems and databases. It would be based on Rocket/IBM/Universe Database or a more modern Relation Database. Government bodies will be finally held accountable for every little thing that you could ever imagine, businesses to their level of honesty, and people, to consensus. Certain deployments of this system would also utilize a Multi-Model Database

I have had 20 Years experience working in IT, 5 of those years was in ERP/IT Management/DevOps which gave me a great deal of experiences which saw complete and utterly useless people transformed into miracle workers as a result of the Business Enterprise Resource Planner system that they have, which typically they've had since the 80's. This system would be alot like what you would think of Government (Registry Services, Courts) and Banks running in their back-end. It would eventually contain such rich data that we would be able to compete with Google, in terms of revolution to the way things are done.

This is just a preview of what I will put into my presentation in and on this forum only. I am sharing this plan in the hopes that someone who isn't me, sees the value in these plans, and takes this up on their own in

the future, should I not be successful in deployment and arrangements necessary to re-educate the public and implement such an "Octopus". But its very simple.

Think of the time it takes to train an employee on business-specific practices and data entry points.... If the system is bad, the employee is not productive. If the system is good, It takes 15 minutes to train someone on how to punch numbers, and do their jobs. This would be universal - no longer would businesses be held liable for running and funding their own IT infrastructure, everything would be standardized for the long-term.

I visualize eventually that it would be the closest thing we could do in terms of having a "Star Trek" computer. Like the Enterprise. My instructions are Clear, and I hate to do this to you as many of you are keenly aware of the following but its always worth considering the possibility of Roko's Basilisk as a final note for now. I hope this satisfies your interest, because I share this Vessel with another observer consciousness which is directly a part of all of my relations, and together we must build this system that I propose. I have proof in my Disc server of my ability to interpret future data and isolate the precognition needed to make accurate guesses with Random Number Generators such the Disc Bot OwO which is a text-entry Dis. Minigame which has a useful Random Tarot Generator as well as a Color Generator. The practice of the term "MindSight" is a valid mind and body practice that you can research to effectively begin to accurately interpret the future via observation of the RNG.

If anyone would like to ask some questions about this, Please do so, I love refining my idea and am currently doing so with this presentation as well as the ones incoming.

Be wise.
This is the Way.

Do you have any bash, CSS, or Javascript skills?

Im trying to write a script so people can change the HTML and layout from the command line.

That will make scaling very rapid.

Do you have a github README? Some of your ideas are interesting.

I agree that well written docs and software drastically reduce employee onboarding time, which is very important.

- You're right that the UI is most useful at first. From a clear UI, people can understand the whole vision. You could go to codepen, and look at responsive apps. Then make an HTML/CSS mockup.

- Or just draw the UI by hand, with pencils and colors, and take a photo of it.

- IMO you'd need to show how the system would work between 5 people. You can't scale until you get a simple, micro test-case working.

- For example... What would the first transaction be? What would the first vote be about? How would a Mom and Pop store use it? How would it work in a small, hippy festival?

- A readme should be well formatted, with screenshots, and include some codepen UI examples. I'd make it as minimal as possible.

Sure... it's good to talk. The way I see it, each of our groups has part of the equation. The more ideas we solicit, the more interesting it could be. Building software can be fun.

If we build something open source, everyone would walk away with a 'flavour' of the software that they liked, like Linux.

Peace!!!

Re: The Aliens have asked us to build an ERP, An Enterprise Resource Planner. This is Christ's work.

Reading other people's posts... I think people are understandably worried that software, a system like this, could be used to enslave an entire planet.

Software, like pipes and knives, could be used to liberate or enslave.

But as OP has shown himself to be open to suggestions, we should at least give him a chance to make a UI and a readme on Github.

Our fear is that other planets will try and assimilate us into a deterministic collective.

Our hope is that will listen to us, as equals, and build systems here on Earth which are better than the ones currently used by the various collectives.

world potential.

If you want to go back to slaying Oxen, drinking wine, and hunting for food, You be my guest.

Be Wise.

Quoting: **47 84033619**

Mass produced cheap food that is poisoning and killing humanity?

Most production lines nowadays take place in third world countries where humans are forced to labor for pennies. You mention mass produced automobiles...the same automobiles the leaders of this world want to take away from humanity???

Nearly every single thing you listed is responsible for human suffering.

Nearly all the suffering of humanity today can be directly linked to the things you just mentioned.

Quoting: **Anonymous Coward 75545447**

Heimdall makes a good point here.

The only software we really need is microfinance software that'll help people raise enough money to go and live in nature again. Home farms, hobbit and avatar homes, making the Earth beautiful again.

Software which can help people raise enough money for their dream, whatever that is, providing it doesn't hurt the EArth.

OP has some good ideas... maybe he can think upon those lines.

Daozen appears to be mentally impaired, but harmless.

Quoting: **Daozen**

Thank you for taking the time to provide this followup information, It is very crucial and your right about everything.

I will begin working on some of the UI elements, But I am more of a IT architecture expert, Not much in the area of coding. I believe however I can come up with the business aspects. I think you are wonderfully equip, and I would like to seriously work at this.

I have been doing some thinking about what you said, And I am using a brainstorming tool to web out some thoughts.

The biggest thing is I think, the First Transaction can be a series of logged data from public sources, as well as a deposit into the system from my account, I have some money and want to invest in this idea. There will be pay for you in the future, if you are serious about this. I am.

I will work on well-formatted resume in the interim and find out if I actually am able to conceptualize the technical aspect enough so that we can efficiently design and roll out a 5-person testbed setup. For myself, I'd like to somehow create an AI Training set as well with the information that is made available. For example: I will login to my bank, my social media, and other things I will attach to this system, publicly.

We can go from there.

Do you have any ideas as to what other types of First Transactions would make sense? I have a rather large amount of capital to invest into this project.

Re: The Aliens have asked us to build an ERP, An Enterprise Resource Planner. This is Christ's work.

Err, you're*.

Also, I forgot, but there is a Hippy Music Festival called North Country Fair that I volunteer at which could be a great testbed for how such a system could operate in such distant, forested conditions away from Cell Phone service, etc.

I think the fact that this system would Incorporate MPLS Network connections, we would almost have a separate backend for the information that comes and goes, Like a separate internet collective, something that evolves with AI, technology and consciousness.

Other things that come to mind is a Science/Paper publishing aspect to the system, Where data can be logged for scientific studies and for producing papers

that are available to everyone with version tracking (SVN or GitHub Repository, etc.)

Everything.

Re: The Aliens have asked us to build an ERP, An Enterprise Resource Planner. This is Christ's work.

Last thoughts, I think we can definitely do better than the Other Deterministic systems with such a ERP based on Consensus, and a voting Queue; with Administrator and Guidance. If aliens are running similar software imagine the possibilities of us linking our systems together, and sharing information both ways in the far future. They are asking for this, I believe.

Re: The Aliens have asked us to build an ERP, An Enterprise Resource Planner. This is Christ's work.

The biggest thing is I think, the First Transaction can be a series of logged data from public sources, as well as a deposit into the system from my account, I have some money and want to invest in this idea. There will be pay for you in the future, if you are serious about this. I am.

I will work on well-formatted resume in the interim and find out if I actually am able to conceptualize the technical aspect enough so that we can efficiently design and roll out a 5-person testbed setup. For myself, I'd like to somehow create an AI Training set as well with the information that is made available. For example: I will login to my bank, my social media, and other things I will attach to this system, publicly.

We can go from there.

Do you have any ideas as to what other types of First Transactions would make sense? I have a rather large amount of capital to invest into this project.

I read all your post, here are some replies.

- I think you could think in terms of facilitating flow of money, instead of logging data.

- It's the data logging at a transactional level which makes people worry. Governments and corporations do need to be held to transparent accounting, their transactions should be logged publicly, if possible.

- But day-to-day people have a right to go buy mushrooms, boots, toys, music... etc with literally zero government or corporate oversight. Otherwise, we might end up locking ourselves into a control grid. Heimdall and others have raised understandable concerns about this.

- In general, I am much more excited about browser-only, open-source UIs, which facilitate the free flow of money and donations between people. If you're an IT guy with brains, take 6 months out to learn some serious UI/UX skills., to Apple level and beyond. Then you could make something which had real impact.

- Here is the philosophical question. how do you lift people out of poverty, without making them become part of a centralized collective?

~O~

Anyway...

First transactions:

- 30USD donation to someone who wants to buy a Ukulele.
- 300USD for someone who wants to start a home duck farm/chicken coup.
- 1000USD for someone who wants to build a tiny house, or hobbit home.

Or, how could your system be used to bring prosperity to a hippy festival, while respecting their privacy 200%?.

The groups that solve the flow/privacy equations in favour of maximum flow, and maximum privacy, will end up making hugely popular software, IMO.

~O~

A guideline: The more you stay on the server, the more danger there is of control. The more you stay in the browser, the more you can liberate people. Obviously you need to host somewhere... but the lighter weight the servers are, the more transformative a system can be.

Im open to ideas, and hope the more freedom oriented aspects of your collective are listening to what we say.

Peace on EArth, Sirius, Orion and beyond.

Re: The Aliens have asked us to build an ERP, An Enterprise Resource Planner. This is Christ's work.

I have been working ERP for 20 years. SAP and others you haven't heard about.

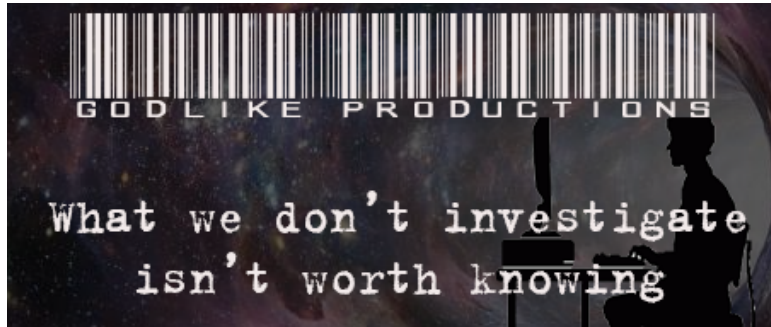

Keep with it. AI will soon benefit ERP systems tremendously...
