**There was a planet once in between Mars and Jupiter**

It was called Phaeton, and makes up the asteroid belt currently in between the 4th and 5th current planet.

NASA gaslights everything- but rock just doesnt mysteriously materialize in space without something being destroyed.

SO- what was it that destroyed this planet?

was it a large object?  
was it grav from jupiter? which is way too far away for this to be plausible  
was it unknown beings or forces to nuke the planet just to be sure?  
the combined wealth of the rocks in this belt is 1000x more wealth in iron and gold than earth has to offer they know something.

**Re: There was a planet once in between Mars and Jupiter**

Nope.

It was called Planet Claire.

## The B-52's Planet Claire live from 1983

the combined wealth of the rocks in this belt is 1000x more wealth in iron and gold than earth has to offer they know something.

Quoting: **Anonymous Coward 81822202**

Book of Revelation: And there was war in heaven, Michael and Arch Angels fought.. Goes something like that.

There are also debris fields on both sides of Jupiter.

**Re: There was a planet once in between Mars and Jupiter**

Correct. Titius-Bode's law very accurately predicts every planet out to Pluto. With the exception of Neptune. Neptune is a rogue planet that does not belong in our solar system. Perhaps this rogue planet struck the planet that is the asteroid belt. Ceres is the core of the planet while the "asteroids" were the accretion disk around that core. This is why they have covered up and tried to hide Titius-Bode Law as it is the truth.

Smile !

I first heard about this at a friends house for dinner. And was totally fascinated by the theory. Hence i began to study and research it. As i tend to do that with things that seem impossible but ... could perhaps have some reality etc to them. And the more i studied it the more i found on the topic. Have to admit that i learned about researching things in college and enjoy doing so. But this one seemed to be so impossible that i wondered why i bothered at first. But the more i researched it the more i realized that there might be something true about it. And soon became convinced that it was true and that perhaps that was where humans first were either created or evolved from (whatever). And how or why we ended up here on planet earth... Actually that after the destruction of that planet. There was no one to come and save us. Also... there was there was no where to take us. So we had to create our own new civilization. I won't go into it but during that research i learned a lot about the various types of Humanoids which was a bit of an experiment. But have already typed way

to much so won't go into that !!!

**Re: There was a planet once in between Mars and Jupiter**

Reptilian home world, was mostly water. Destroyed completely by the Grays from Mars during their war. Both races now on Earth and in hiding. Reptilians fear the Grays will destroy Earth too if they ever leave their underground caverns. us&a feeds them humans so they mostly come out at night. Mostly.

NASA has leaked video of their ships shooting at each other in space. Seems the Reptilians want to destroy the Grays ancient base we call the Moon.

Exciting time to be alive!

**Re: There was a planet once in between Mars and Jupiter**

There's a theory that Saturn used to be brown dwarf star and Earth was one of it's satellites. Saturn was captured by our current sun and lost mass turning into a giant planet.

the rings around the larger planets were also moons once but obliterated by comets or large objects as well

as of right now they are a front shield to earth, with the moon being a secondary shield hence the mount of craters in it right now.

yeah its called an abundance of CO2 in the atomosphere proven by science - not to be confused with \$cience now that after 100 years pluto isnt a planet anymore and we go from global warming to climate change each year depending what the ppl at HAARP want to do 70 degrees then -19 degrees back to 70 degrees in the deep south is not a natural occurance especially right near xmas for traveling- this snap freeze was 100% man made

human beings have been around for millions of years- we are the 6th civilization to survive an ELE event here which blew up these other planets/moons to create asteroid belts - tartaria.atlantis- this is all true being held in silence under the 10 sq mile Vatican vault that holds humanities secrets- but if Constantine ordered his disciples to write the KJ bible almost over night with a few pages- then what does 10 sq MILES of library the Vatican hold REALLY? you cant even go down there without a gas mask cuz the oxygen will "degrade" the paper. humanoids are and have been on the dark side of the moon for 1000s of years since it never rotates which is SUS AF to begin with (only moon in the solar system that doesn't rotate) the fact there is a blacked out HOLE on google maps on antarctica in the center which only gov officials, scientists, and celebs are actually allowed to visit now- and the fact the guy that flew over antarctica first was silenced and black balled.

sum ting fishy

**Re: There was a planet once in between Mars and Jupiter**

nuclear war on mars may have occurred 500 million years ago

by some reckonings that is when asteroid belt was formed by destruction of what had been planet Phaeton

btw an asteroid from the belt crashed into scandanavia, maybe it was sweden, around 500 million years ago

was this the result of a war between civilizations on mars and phaeton? perhaps one was an off-planet colony established by the other ... however, if mars was nuked, it is odd that an actual planet was also destroyed because the level of tech of weaponry to blast a planet sized body to pieces is much greater than that of nukes
